

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at page 2, line 19, with the following amended paragraph:

The executable code for printers and similar devices is exceptionally small, requiring only a very small ~~NVRAM~~ NVRAM. In more major systems, such as automated data storage libraries, a module processor may comprise a processor of the power of a workstation or PC, and the executable code for each module processor is quite large.

Please replace the paragraph beginning at page 14, line 15, with the following amended paragraph:

The library **10** receives commands from one or more host systems **40**, **41** or **42**. The host systems, such as host servers, communicate with the library, either directly on path **80**, or through one or more data storage drives **15** on paths **81** or **82**. The paths **80**, **81** or **82** may, for example, comprise SCSI busses or ~~fibre~~ fiber channel arbitrated loops.
